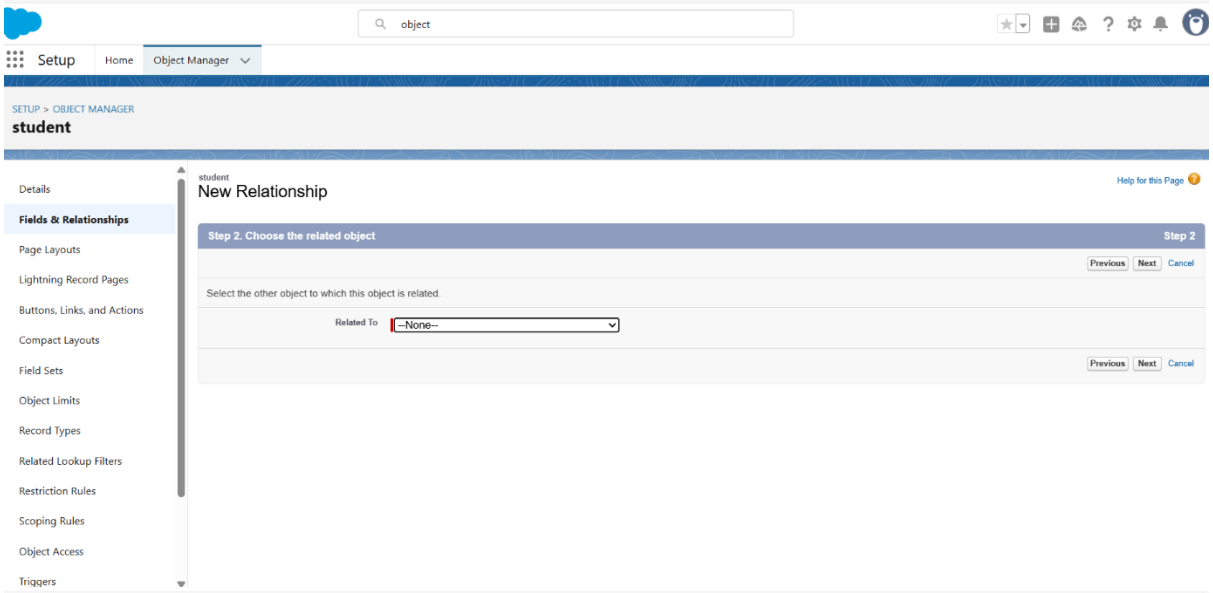
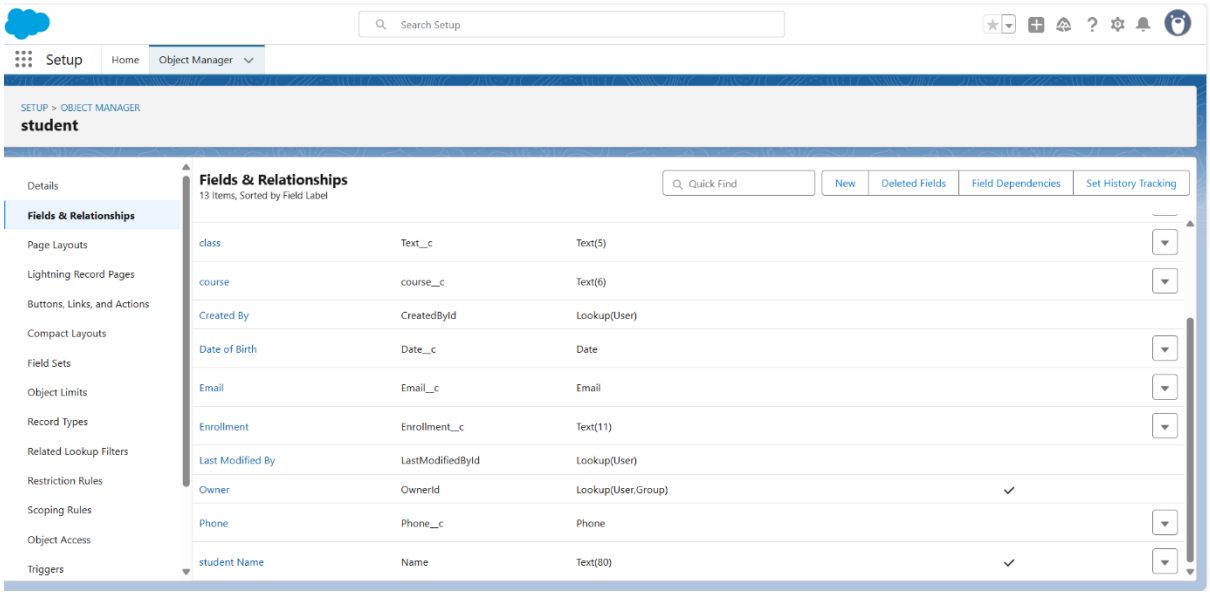
✅ 6. Create Relationships

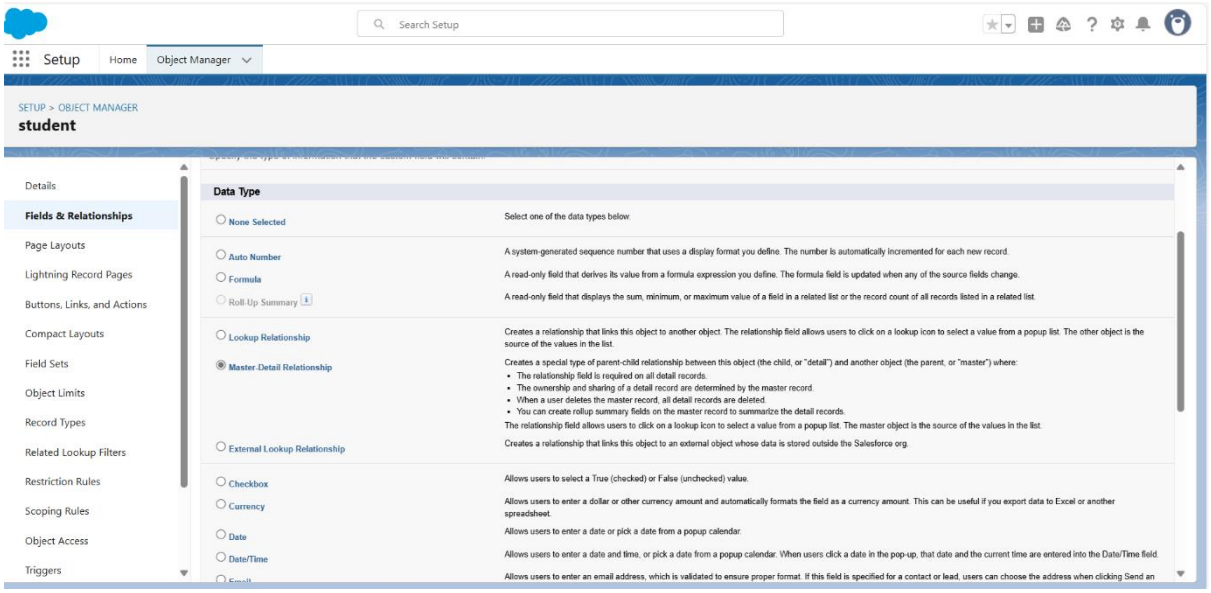
You already did this using **Lookup Fields** in Enrollment and Attendance:

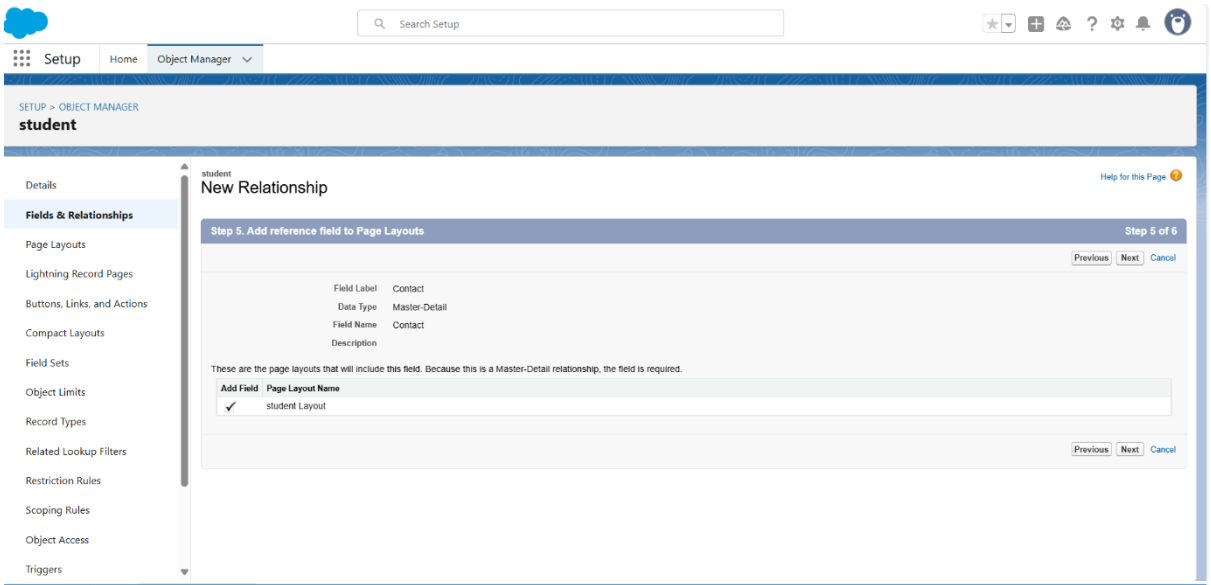
- Student ↔ Enrollment
- Course ↔ Enrollment
- Student ↔ Attendance
- Course ↔ Attendance

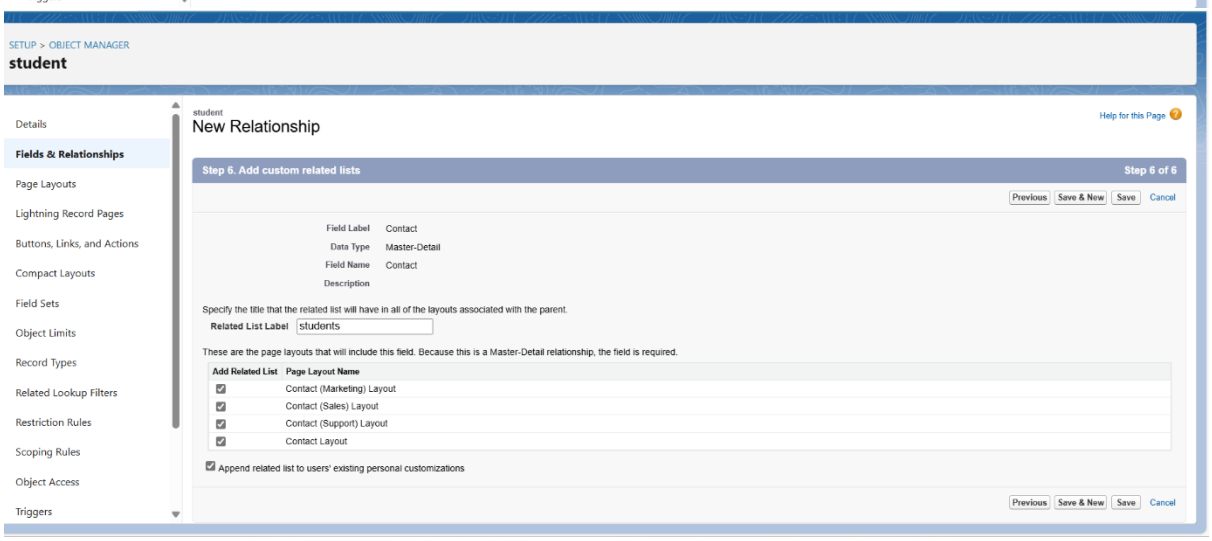
✅ These will show related records automatically on detail pages.







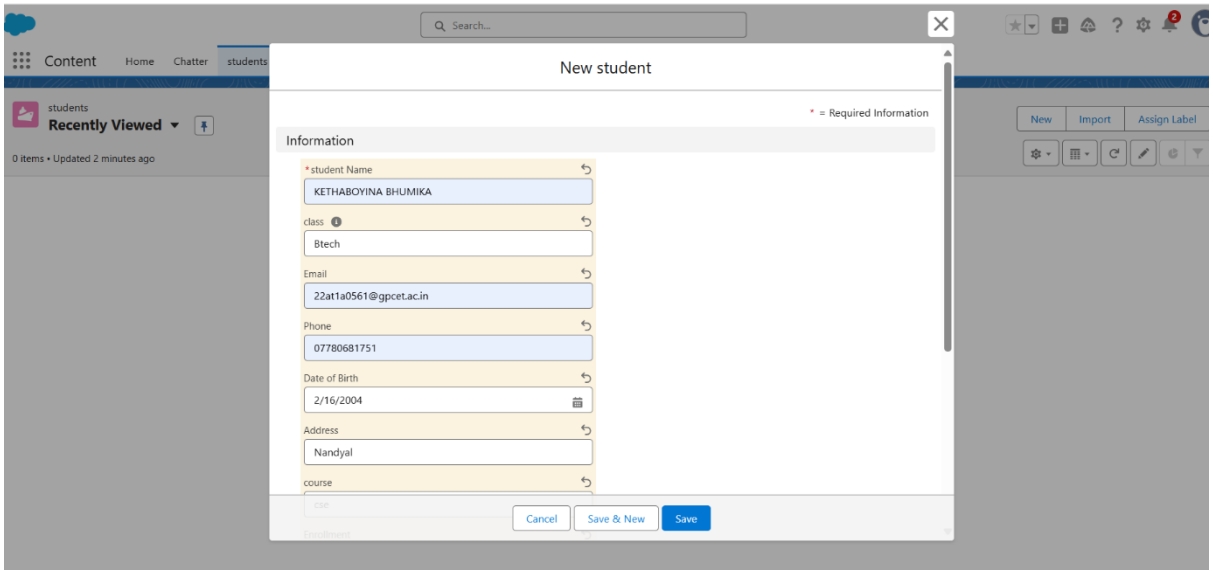


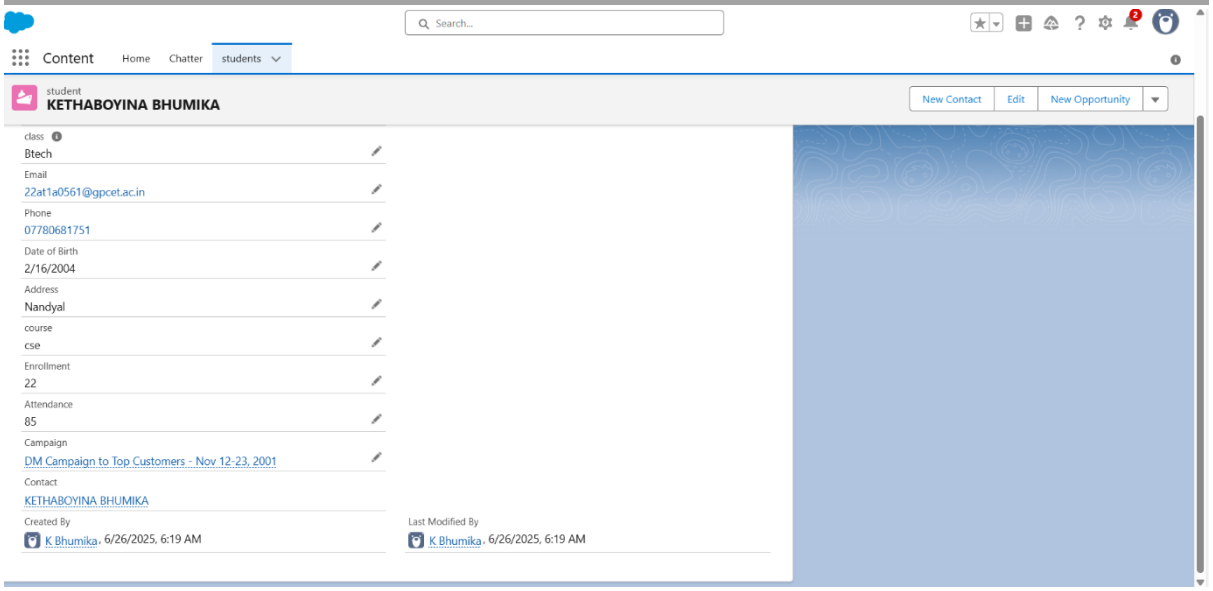


✅ 7. Add Sample Data

- Add 2–3 Students
- Add a few Courses

- Create Enrollments linking Students to Courses
- Add daily Attendance entries





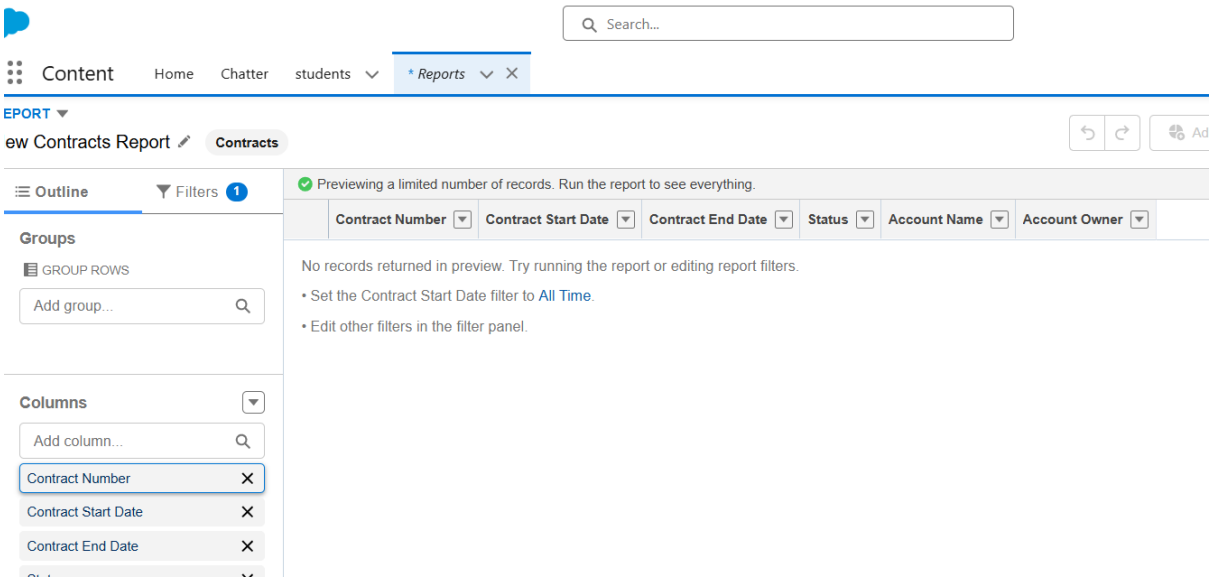
✅ 8. Create Reports

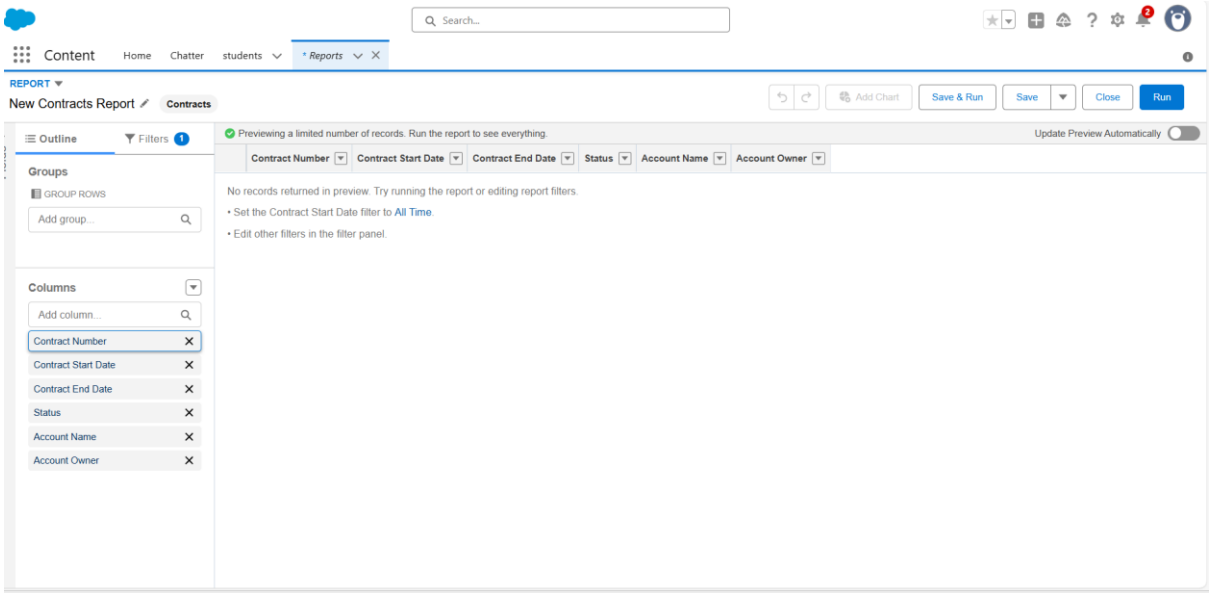
Go to **Reports → New Report Type**

- Primary Object: Enrollment
- Related: Student, Course

Create reports like:

- Students enrolled per course
- Attendance summary for each student
- Most popular courses





✅ 9. Create Dashboards

Go to **Dashboards → New Dashboard**

Add components:

- Bar chart: Students per Course
- Pie chart: Attendance Status
- Table: Students with low attendance

✅ 10. (Optional) Automation with Flow

- Example:
  Auto-enroll new students in a default course using a Record-Triggered Flow:
- Object: Student
- Trigger: On Create
- Action: Create Enrollment record with default Course

- 
- ✅ **Project Outcome**
- 🎯 You've now built a full system that handles:
- Student Information
- Course Management
- Enrollment
- Attendance
- Reporting and Visualization
